

## **Safestone Technologies Announces the Launch of a New Website and Corporate Identity**

**18<sup>th</sup> March 2008** - **Safestone Technologies** has launched a completely new website and visual identity to support its evolution as the global leader in solutions for IBM System i security, audit and compliance.

The new corporate identity reflects the Company's commitment to the provision of leading-edge software and expertise to organizations wishing to practice proactive compliance and security on IBM System i midrange servers including iSeries and AS/400.

"Safestone Technologies pioneered modular security and compliance solutions for System i with the award-winning Security Manager suite, DetectIT and over recent years has implemented technological breakthroughs that have taken this concept to a completely new level," said Philip Johnson, Development Director, Safestone Technologies.

"The importance of information security will only continue to grow as the System i evolves further. The new website and marketing aims to engage business managers, auditors and users by effectively communicating our philosophy of understanding security, audit and compliance from a customer perspective."

Philip Johnson concluded, "We are still the same company, and hope that our new identity will demonstrate that Safestone understands the complex regulatory challenges facing organizations and is well positioned to provide the level of service that so many companies today are looking for."

Safestone's **DetectIT Security Manager** is a modular and integrated approach that can help define, manage and report on security policy compliance, enabling future audits to be passed simply, quickly and efficiently. This can remove the burden of administration, reduce IT costs and streamline the complete reporting process for companies looking to pass or continue their compliance audits.

Modules include:

<ul style="list-style-type: none"> <li>• <b>Risk and Compliance Monitor</b></li> </ul>	Identifies policy compliance vulnerabilities by reporting against off the shelf policies (SOX, PCI, Basel II, ISO 17799 etc.) and in so doing helping to prepare organisations for audit.
<ul style="list-style-type: none"> <li>• <b>Security Audit and Detection</b></li> </ul>	Comprehensive real time intrusion detection and alerting allowing pro-active management of security events and potential breaches
<ul style="list-style-type: none"> <li>• <b>Network Traffic Controller</b></li> </ul>	Exit point management and reporting tool for controlling remote access requests from networked devices
<ul style="list-style-type: none"> <li>• <b>User Profile Manager</b></li> </ul>	Powerful administration tool controlling user profiles and passwords resulting in appropriate levels of resource access control.
<ul style="list-style-type: none"> <li>• <b>Password Self Help</b></li> </ul>	Delegates password resetting to the user maximising user productivity and freeing up the helpdesk.
<ul style="list-style-type: none"> <li>• <b>Multiple Systems Administrator</b></li> </ul>	Enables centralized management of networked System i servers and partitions through a single point of control

### **Safestone Company Overview**

Partner of choice for global financial and banking institutions with the most stringent security and compliance requirements, Safestone provides the most comprehensive solution in System i security to over 500 blue-chip customers worldwide.

Safestone's module-based solutions are flexible, scalable, easy to implement and use, allowing the solution to address all varying degrees of audit, compliance and security requirements.

Safestone has built up a global network over more than 21 years, which provides localized sales, consultancy and professional services to help organizations manage all their System i security requirements.
